

HailGuard Pro

Executive Summary — One Page Overview

Vehicle Hail Damage Intelligence for Touchless Auto Dent Removal Technology | May 2026

What is HailGuard Pro?

HailGuard Pro is a professional intelligence platform that helps companies offering **touchless auto dent removal technology** identify high-potential markets, understand hail damage patterns, and find strong franchise or partnership opportunities in Tornado Alley and the Midwest.

Core Value

- View **30-year historical hail concentration** with an intensity slider
- Explore **specific 2026 severe hail events** using a date slider
- Identify **“Service Gap” zones** (high damage + low repair density)
- Get clear, AI-powered recommendations on outreach potential per region

Key Features at a Glance

Feature	What It Does	Best Used For
30-Year Hail Hotspots + Slider	Clean circle markers showing long-term damage patterns	Identifying strongest historical zones
2026 Severe Hail Events Slider	View specific 2026 hail events by selecting dates	Showing recent, real damage examples
Region Intelligence Panel	Auto-updates with recommendations as you move the map	Fast decision-making & presentations
Service Gap Layer (Purple)	Highlights high-damage, low-service areas	Franchise targeting
Business Ratings Layer	Repair shops colored by Google-style star rating	Finding potential partners

Recommended Workflows

For Franchise Development: Turn on 30-Year Hotspots → Increase intensity slider → Look for “Strongly Positive” zones in the Region Intelligence panel → Zoom in and check Business ratings.

For Sales Demos: Start with the 2026 slider → Show recent dramatic events → Switch to 30-Year view → Highlight Service Gaps (purple).

Why It Matters

Real user reports from X and Reddit confirm frequent vehicle dent claims and parking concerns during storms in these exact zones. HailGuard Pro turns that real-world pain into clear, visual, actionable intelligence.

Ready to explore high-opportunity markets? Open the tool → Move the map → Watch the Region Intelligence panel update in real time.
